Utah’s future energy policies will affect your family’s health

Because of the strong link between pollution and public health, our energy policies will become essentially public health policies.

Some state leaders are pushing oil shale, tar sands, and nuclear power plants in Utah and to expand the mining of coal, and drilling for oil and gas.

The America Lung Association already gives Utah’s air quality a grade of “F”.

Come listen to experts from the Utah Physicians for a Healthy Environment (UPHE) discuss the health consequences of Utah’s future energy choices.
