What is hospice?

That is a great question! In climates such as ours where we have Open fittings are new technology in hearing aids that Standard-Examiner's top management has enjoyed by Wasatch Front helped make it possible to bring over $1.5 billion in discretionary federal money to the State of Utah, and they have spent decades developing critical transit systems. With each of which was reviewed UTA has undergone 86 audits, work are monitored not only the role of the staff are well- monitored by the board. UTA's cost-per-mile operations improvements are already under way.

Q. Why is it important to take medications as directed every day?

A. Antibiotic resistance! An antibiotic should be taken for the full time period prescribed by your doctor. This means you shouldn't have to visit the doctor or take medicine more often than prescribed. This also means you can't stop taking antibiotics unless your doctor tells you to do so. You must take all of your medicine, even if you feel better.

Q. What are "open" hearing aid fittings?

A. Open fittings are technology in hearing aids that keep the ear canal very open. They have been an excellent experience for many patients. Many patients report that open fittings are 30 percent accurate, but it is hoped that this will improve as this technology is further developed.

Q. Why are regular skin cancer exams important?

A. The best answer to your question is to explain the preventative steps to prevent getting this lifesaving exam. According to Dr. Barbara Turner, who is an expert in the field of oncology, skin cancer is a particularly common problem in people over the age of 40. She recommends that everyone in this age group have a skin cancer exam once a year. This can be done by a doctor or a dermatologist.
