Based on educational research, similar to other multimedia learning strategies, there are several benefits to using multimedia learning. First, multimedia learning can enhance the learning experience by providing visual, auditory, and textual information simultaneously. This can help students understand complex concepts more effectively. Second, multimedia learning can improve retention and recall of information. Studies have shown that students who use multimedia materials are more likely to remember the information than those who use traditional text-based materials alone. Third, multimedia learning can cater to different learning styles, making it more inclusive and accessible to all students. Finally, multimedia learning can be engaging and interactive, making the learning process more enjoyable and motivating for students.
