Load your gear for your ADVENTURE

1. Place foam blocks at each end of the vehicle roof with the blocks placed centered on the roof (avoiding sunroof). Canoes have foam blocks that are placed on the center of the perimeter on both sides.

2. With a partner, lift boat and place centered on top of roof. (SUPs and canoes are placed upside down, kayaks are places right side up)

3. Holding onto the buckle, throw the strap across the vehicle, open the doors and feed the strap through the inside of the car. Buckles should be on opposite sides of the vehicle.

4. Place the buckle on the boat and feed the end through the back side of the buckle. Tighten down the straps at the same time as your partner to strap the boat down evenly.

5. When tightening make sure the boat isn’t touching any part of the vehicle. Give the boat a good shake to make sure it’s solid. Tuck the excess straps away and you’re good to go!
